Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

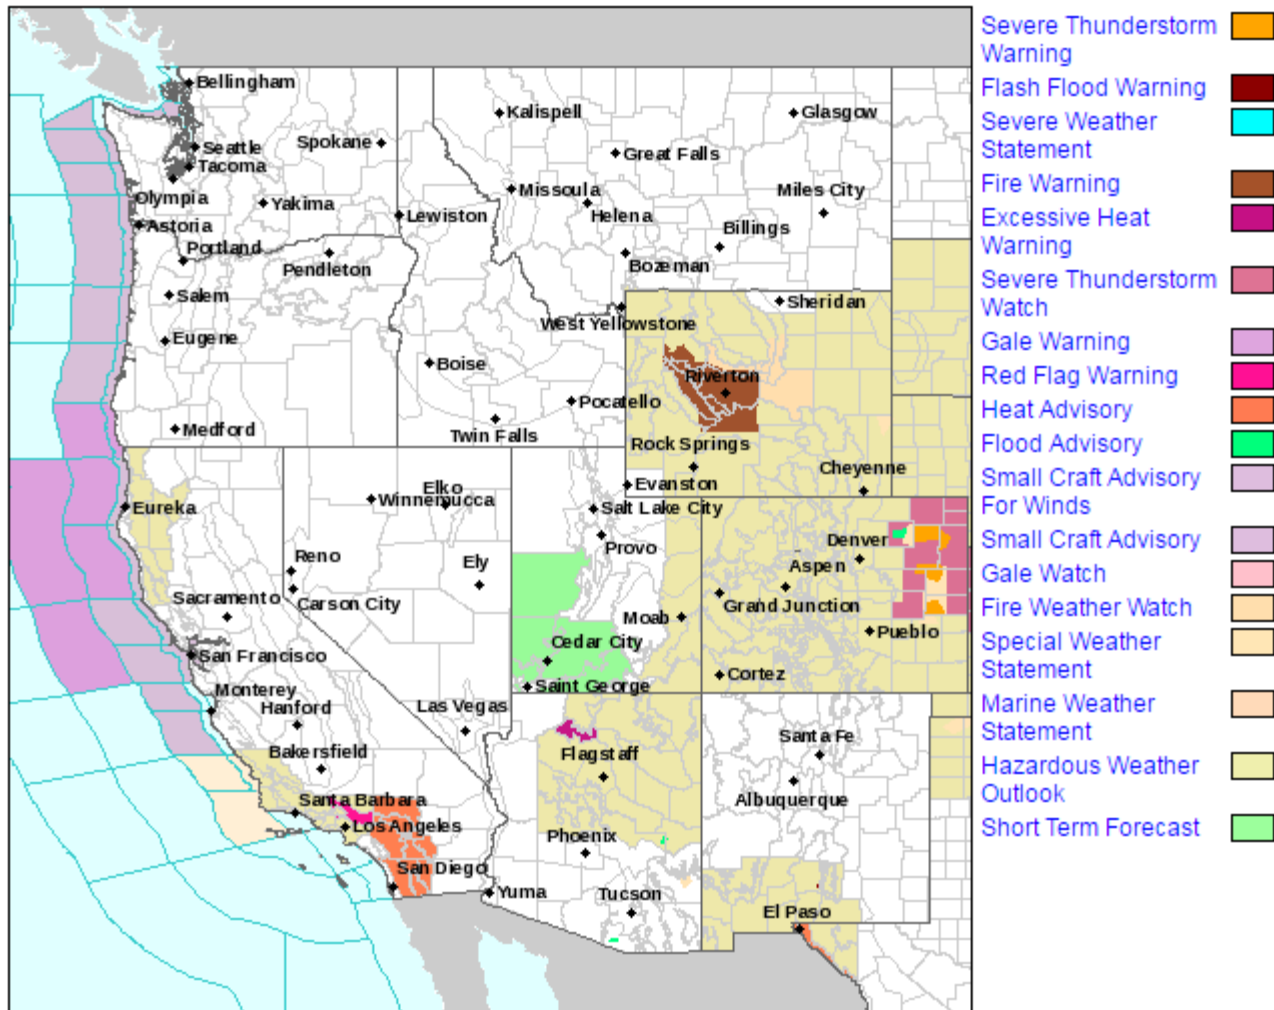

High pressure will build over Southern California and the Eastern Pacific over the next few days, but a weak low pressure trough will remain over Northern California. A northwest to northeast downslope surface wind pattern is producing local gusts to 20-30 mph this morning in and around the Sacramento Valley. These winds will continue at lighter speeds this afternoon, with gusts only reaching 15-20 mph in wind-prone areas. Humidity will drop to 5-15% this afternoon, and only recover to 20-30% tonight. These winds will return each night during the 7-Day period, but light upslope/up-valley winds are expected each afternoon beginning Sunday. Poor overnight RH recovery will be common in inland areas each night. Temperatures throughout the region will be a few degrees above normal through Monday. Beginning Tuesday the high pressure ridge will push over Northern California and temperatures will increase further. Afternoon highs around 110 may become possible in the warmest inland valleys by the middle of the week. The coastal marine layer will be shallow and only affect areas near the immediate coast.

SOUTHERN CALIFORNIA

The high pressure ridge overhead is weakening a bit which will allow onshore flow to increase over the area the next few days. This will result in cooler weather along the coast with typical sea breezes during the afternoon. The marine layer will return to the coastal areas, but inland penetration will be minimal and it will remain very warm and dry over interior locations and higher elevations. Temperatures away from the coastal influence will still remain above normal this week with highs in the mid to upper 90s in the inland valleys and foothills. The mountains below 7,000 feet will remain in the 80s. South and southwest winds of 15-25 mph with gusts to near 35 mph will be possible in the Santa Clarita valley into the Antelope Valley, the Apple Valley and the Banning Pass this afternoon and again Monday afternoon. Minimum RH will still be in the single digits at elevations from 1,500 feet to 5,000 over much of the area today, but a bit higher afternoon RH will be possible toward midweek. Expect temperatures to drop a degree or two Monday and Tuesday, but otherwise, similar weather conditions can be expected. Some afternoon sea breezes to 25 mph will be possible each afternoon this week in the wind prone areas. Models are now indicating monsoonal moisture may reach the deserts Wednesday or Thursday. The moisture may shift westward Friday and Saturday, leading to isolated wet thunderstorms in the San Bernardino and Cleveland National Forests. Look for slightly higher relative humidity readings over Southern California toward the end of the week. Winds look to be much weaker this week overall with temperatures remaining 5-10 degrees above normal.
